- Whenever you enter a query in a search engine and hit 'enter' you get a list of web results that contain that query term. Users normally tend to visit websites that are at the top of this list as they perceive those to be more relevant to the query.
- If you have ever wondered why some of these websites rank better than the others then you must know that it is because of a powerful web marketing technique called Search Engine Optimization (SEO).
- SEO is the process of enhancing the visibility of a website by improving the ranking in the search engine results page (SERP).
- It is a process of making the website more search engine friendly, thus getting higher positions in 'organic' or 'natural' or 'unpaid' search results.
- SEO is a long-term strategy as it takes time for efforts to make productive. Short term strategy can be to go for paid search advertising.

### Why is SEO Important?

Suppose two online stores sell the same laptop.

- **Store A** appears on **Page 1** of Google.
- **Store B** appears on **Page 5**.

Most customers click Store A because it is easier to find. This shows why SEO is important.

**Objectives of SEO**

- Increase website traffic.
- Improve website visibility.
- Attract potential customers.
- Increase online sales.
- Build brand credibility.
- Improve user experience.

**Types of Search Results****1. Organic Search Results**

- Free listings.
- Achieved through SEO.
- Long-term results.

**2. Paid Search Results**

- Advertisements.
- Businesses pay for clicks.
- Quick but temporary results.

**Organic vs Paid Search**

| <b>Organic Search</b> | <b>Paid Search</b>               |
|-----------------------|----------------------------------|
| Free                  | Paid Advertisement               |
| Long-term results     | Immediate results                |
| Achieved through SEO  | Achieved through Google Ads      |
| Builds trust          | Sponsored listings               |
| Sustainable traffic   | Traffic stops when payment stops |

**Benefits of SEO**

- Higher website ranking.
- Increased website visitors.
- Better user experience.
- Cost-effective marketing.
- Higher brand awareness.
- Increased sales.
- Long-term business growth.

**Applications of SEO**

SEO is used in:

- E-commerce websites
- Educational institutions
- Banks
- Hospitals
- Tourism websites
- Government portals

- Blogs
- News websites

### **Importance of SEO**

SEO is one of the most important components of Digital Marketing because it helps businesses become visible to customers searching online.

---

#### **1. Increases Website Visibility**

Higher rankings mean more people can find the website.

---

#### **2. Generates Organic Traffic**

SEO attracts visitors without paying for advertisements.

---

#### **3. Builds Customer Trust**

Users generally trust websites that appear at the top of Google search results.

---

#### **4. Cost-Effective Marketing**

Unlike paid advertisements, SEO does not require payment for every click.

---

#### **5. Improves User Experience**

SEO encourages:

- Faster websites
- Mobile-friendly design
- Better navigation
- High-quality content

---

#### **6. Supports Business Growth**

Better visibility leads to:

- More visitors
- More inquiries
- More sales

---

### **Need of SEO in Digital Marketing**

Today, millions of websites compete for attention.

Without SEO:

- Customers cannot easily find the website.
- Website traffic remains low.
- Sales decrease.
- Competitors gain an advantage.

Therefore, SEO is essential for businesses to succeed online.

---

### **Real-Life Example**

#### **Local Bakery**

Without SEO:

- Website appears on Page 8 of Google.
- Very few visitors.

After SEO:

- Website appears on Page 1.
- More customers visit the website.
- Online cake orders increase significantly.

---

**Advantages of SEO**

- Low marketing cost
- Long-term results
- Higher website traffic
- Better customer engagement
- Increased brand awareness
- Better Return on Investment (ROI)

---

**Limitations of SEO**

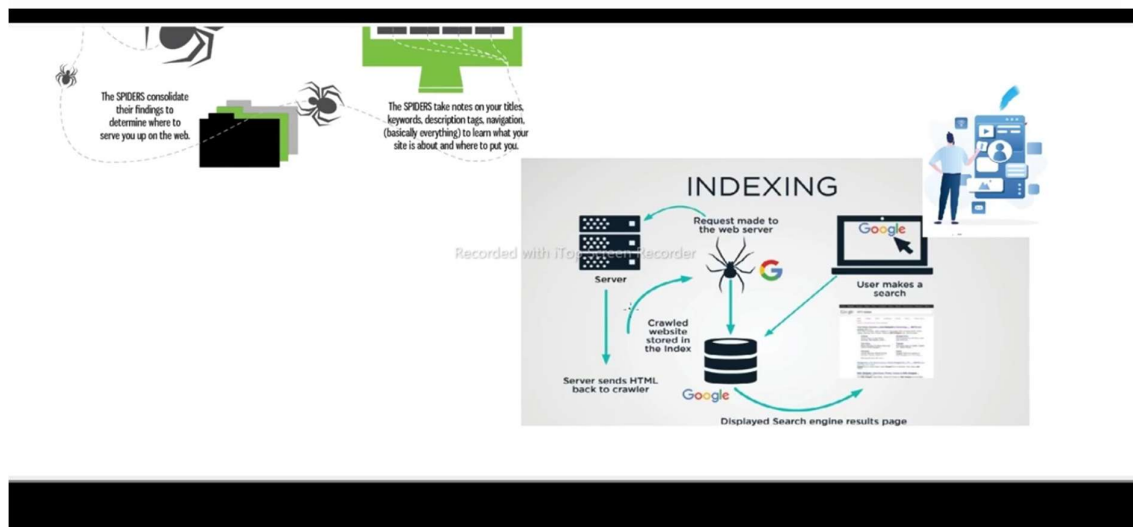

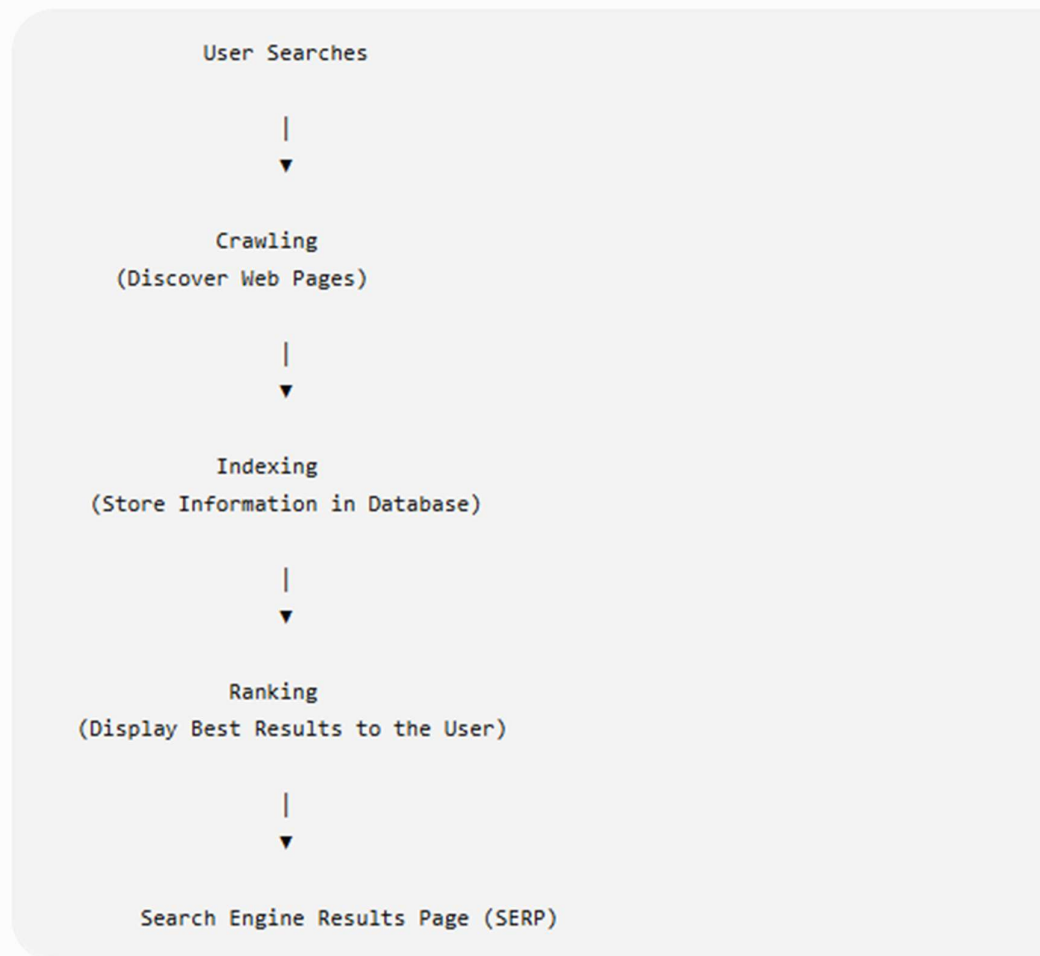

- Results take time.
- Continuous optimization is required.
- Search engine algorithms change frequently.
- High competition for popular keywords.

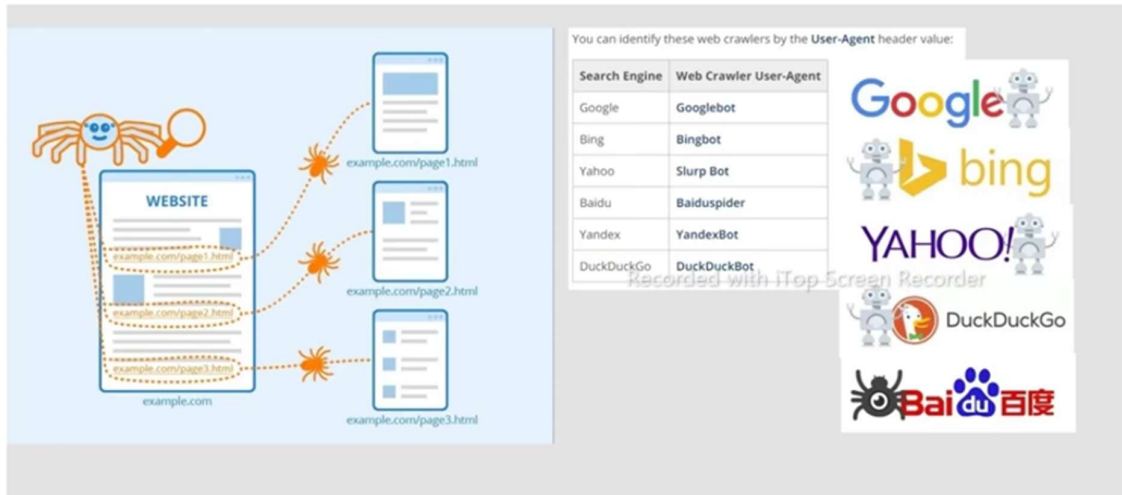

## How Search Engine works

1. **Crawling:** Search engines use automated software programs called crawlers or spiders to discover web pages on the internet. The crawlers follow links from one page to another and store the content of each page in a database known as an index.
2. **Indexing:** Once a page is crawled, its content is analyzed and indexed based on its relevance and importance to specific keywords and phrases. The index is used to retrieve relevant pages for search queries.
3. **Ranking:** When a user enters a search query, the search engine retrieves a list of relevant pages from the index and ranks them based on various factors, such as the page's content, relevance to the query, and authority. The pages that are deemed most relevant and authoritative are typically displayed at the top of the search results.

Search engines use complex algorithms to determine the relevance and authority of web pages, and these algorithms are constantly evolving to provide more accurate and relevant search results. Some of the key factors that influence search engine rankings include the content and structure of the web page, the relevance and authority of the page's links, and the user's search history and location.

## Search Engine Working Process

### Step 1: Crawling

#### Definition

**Crawling** is the process in which search engines use automated programs called **Web Crawlers, Spiders, or Bots** to discover new and updated web pages.

#### Functions of Crawlers

- Visit websites.
- Read webpage content.
- Follow links to other pages.
- Find newly published pages.

#### Example

Googlebot visits a newly created college website and collects its information.

### Step 2: Indexing

#### Definition

**Indexing** is the process of storing and organizing webpage information in the search engine's database.

Only indexed pages can appear in Google search results.

#### During Indexing, Google Stores:

- Page title
- Keywords
- Images
- Videos
- Meta description
- Content
- URLs

### Step 3: Ranking

#### Definition

**Ranking** is the process of deciding the order in which webpages appear on the Search Engine Results Page (SERP).

Google uses hundreds of ranking factors to determine which page should appear first.

#### Important Ranking Factors

- Quality content

- Relevant keywords
- Website speed
- Mobile-friendly design
- Secure website (HTTPS)
- Backlinks
- User experience
- Page loading time

---

### Search Engine Results Page (SERP)

The **Search Engine Results Page (SERP)** is the page displayed after a user enters a search query.

It contains:

- Organic Results
- Paid Advertisements
- Featured Snippets
- Images
- Videos
- Maps

---

### Example of Search Engine Working

**User searches:**

**"Best Pizza in Ahmedabad"**

**Google Process**

1. Crawls restaurant websites.
2. Indexes restaurant information.
3. Ranks websites based on relevance, reviews, and SEO.
4. Displays the best results on the SERP.

---

### How Google Decides Rankings

Google considers many factors, including:

- Content quality
- Keyword relevance
- Mobile friendliness
- Page speed
- Website security (HTTPS)
- Number of quality backlinks
- User engagement
- Freshness of content

#### Difference Between Crawling, Indexing, and Ranking

| Crawling            | Indexing                    | Ranking                              |
|---------------------|-----------------------------|--------------------------------------|
| Discovers web pages | Stores webpage data         | Displays pages in order of relevance |
| Uses web crawlers   | Uses search engine database | Uses ranking algorithms              |
| First step          | Second step                 | Final step                           |

## SEO Methods and Tactics

### White Hat SEO

#### Definition

**White Hat SEO** refers to ethical and legal SEO techniques that follow the guidelines of search engines such as Google. These methods improve website ranking naturally and provide long-term results.

**SEO Methods and Tactics** are the techniques used to improve a website's visibility and ranking in search engine results.

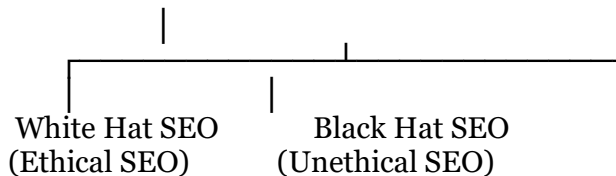

#### Simple Definition

SEO methods are different ways of optimizing a website so that it appears higher in search engine results.

---

### Types of SEO Methods

#### SEO METHODS

---

### Characteristics of White Hat SEO

- Follows Google's guidelines.
- Focuses on user experience.
- Uses high-quality content.
- Provides long-term ranking.
- Safe from Google penalties.

---

### White Hat SEO Techniques

#### 1. Quality Content

Create useful, original, and informative content.

##### Example:

A blog explaining "How to Prepare for Diploma Exams."

---

#### 2. Keyword Optimization

Use relevant keywords naturally in the content.

##### Example:

Keyword: *Digital Marketing Course*

---

#### 3. Mobile-Friendly Website

Ensure the website works properly on smartphones and tablets.

---

#### 4. Fast Website Loading Speed

A fast website improves user experience and ranking.

---

#### 5. Internal Linking

Connect related pages within the same website.

**Example:**

Home → Courses → Digital Marketing

---

## **6. Quality Backlinks**

Obtain backlinks from trusted and relevant websites.

---

## **7. Secure Website (HTTPS)**

Secure websites gain user trust and better rankings.

---

## **8. Image Optimization**

Use descriptive file names and Alt Text for images.

---

## **9. Proper Title & Meta Description**

Write meaningful titles and descriptions for each webpage.

---

### **Advantages of White Hat SEO**

- Long-term ranking.
  - Builds customer trust.
  - Improves website quality.
  - Safe from penalties.
  - Better user experience.
  - Sustainable traffic growth.
- 

### **Disadvantages of White Hat SEO**

- Takes time to show results.
  - Requires continuous effort.
  - High-quality content creation is necessary.
- 

### **Example of White Hat SEO**

A coaching institute:

- Publishes quality study material.
- Optimizes website speed.
- Uses proper keywords.
- Creates educational videos.

As a result, the website gradually reaches the first page of Google.

---

## **Black Hat SEO**

### **Definition**

**Black Hat SEO** refers to unethical techniques used to manipulate search engine rankings by violating search engine guidelines.

These techniques may provide quick results but can lead to severe penalties.

---

### **Characteristics of Black Hat SEO**

- Violates Google's guidelines.
  - Focuses on search engines rather than users.
  - Short-term ranking.
  - High risk of penalties.
  - Unethical optimization.
- 

### **Black Hat SEO Techniques**

---

### 1. Keyword Stuffing

Using the same keyword repeatedly and unnaturally.

#### Example

Buy Shoes, Best Shoes, Cheap Shoes, Shoes Online, Shoes Sale...

This makes content unreadable.

---

### 2. Hidden Text

Hiding keywords by using the same color as the webpage background.

Example:

White text on a white background.

---

### 3. Cloaking

Showing different content to search engines and different content to users.

#### 1. Cloaking

##### Definition

Cloaking is a Black Hat SEO technique where a website shows **different content to search engines** and **different content to users**.

##### Example

Suppose a website owner wants to rank for "Free Python Course."

##### What Google Bot Sees

Free Python Course  
Python Notes  
Programming Tutorials  
Python Interview Questions

##### What User Actually Sees

Online Casino  
Betting Website  
Play & Win Money

Google thinks the page is about **Python courses**, but users see a **gambling website**.

This is **Cloaking**.

---

### 4. Duplicate Content

Copying articles from other websites.

---

### 5. Buying Backlinks

Purchasing backlinks from spam websites.

## 2. Buying Backlinks

### Definition

Buying Backlinks means **paying another website to create links** pointing to your website to artificially improve search rankings.

Google considers this a violation of its guidelines.

### Example

ABC Mobile Store pays ₹20,000 to 500 websites.

All those websites publish:

Buy Smartphones Here  
[www.abcmobile.com](http://www.abcmobile.com)

These are **paid backlinks**, not earned naturally.

Google may penalize the website.

### Real-life Analogy

Imagine paying students to recommend your project as the best project, even though they have never seen it.

That recommendation is not genuine.

---

## 6. Link Farming

Creating large groups of websites only to generate backlinks.

### 3. Link Farming

#### Definition

Link Farming is a Black Hat SEO technique where many websites are created **only to exchange backlinks** instead of providing useful content.

#### Example

Suppose a person creates these websites:

```
website1.com  
website2.com  
website3.com  
website4.com  
website5.com
```

Every website links to every other website.

```
Website 1 → Website 2  
Website 2 → Website 3  
Website 3 → Website 4  
Website 4 → Website 5  
Website 5 → Website 1
```

None of these websites provide useful information.

They exist only to increase backlinks.

This is called a **Link Farm**.

---

### 7. Doorway Pages

Creating pages only for search engines instead of users.

## 4. Doorway Pages

### Definition

A **Doorway Page** is a webpage created mainly to rank for specific keywords and then redirect visitors to another page or website instead of providing useful content.

### Example

A website creates many pages:

Best Laptop in Ahmedabad  
Best Laptop in Surat  
Best Laptop in Rajkot  
Best Laptop in Vadodara

All these pages contain almost identical content.

No matter which page the user opens,

they are redirected to

www.xyzelectronics.com

These pages exist only to attract search engine traffic.

This is a **Doorway Page**.

---

## 8. Clickbait

Using misleading titles to attract visitors.

Example:

"You Won ₹10 Lakh!" (False information)

---

## Disadvantages of Black Hat SEO

- Website may be removed from Google.
- Permanent ranking loss.
- Loss of customer trust.
- Legal and reputation risks.
- No long-term success.

---

## Google Penalties

Google regularly updates its algorithms to detect Black Hat SEO practices.

If a website uses Black Hat SEO:

- Ranking decreases.
- Pages may be removed from search results.
- Website traffic drops.
- Business reputation is affected.

---

## Real-Life Example

A company copied articles from competitors and purchased thousands of fake backlinks.

Initially, the website ranked well.

After Google's algorithm update:

- Website disappeared from Page 1.
- Organic traffic dropped sharply.

- Sales declined.

This demonstrates the risk of using Black Hat SEO.

| S. No. | Black Hat SEO                                                                                                                    | White Hat SEO                                                                                                                                                                                     |
|--------|----------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1      | Black Hat SEO refers to the use of aggressive SEO tactics and strategies that focus only on search engine not on human audience. | White Hat SEO refers to the use of optimization SEO tactics and strategies that focus more on human audience as opposed to search engine and completely follow search engines rules and policies. |
| 2      | It is used by those who are looking for quick financial returns on their website.                                                | It improves your search performance on search engine result page(SERP) along maintaining the integrity of the website.                                                                            |
| 3      | It contains stuff and spam keywords into the on-page contents to fool the search engine spiders and improve ranking.             | It contains proper research, craft titles, Meta tags according to webpage, industry, relevance                                                                                                    |
| 4      | It consists of irrelevant back links.                                                                                            | It gets the link because of quality content.                                                                                                                                                      |
| 5      | It exchanges the links for the ranking.                                                                                          | It consists of natural links.                                                                                                                                                                     |
| ✓6     | It is also known as <u>Unethical SEO</u> .                                                                                       | It is also known as <u>Ethical SEO</u> .                                                                                                                                                          |
| 7      | It is used for short-term goals and benefits.                                                                                    | It is used for long-term goals and benefits.                                                                                                                                                      |
| 8      | This type of optimization is not approved by search engines.                                                                     | This type of optimization is approved by search engines.                                                                                                                                          |

## SEO Optimization Techniques

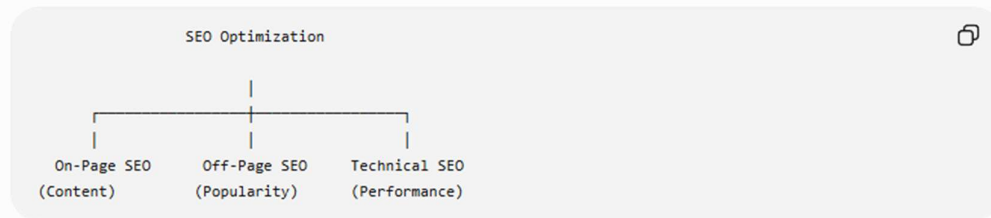

**SEO Optimization Techniques** are methods used to improve a website's visibility and ranking on search engines like Google.

SEO optimization is mainly divided into **three categories**:

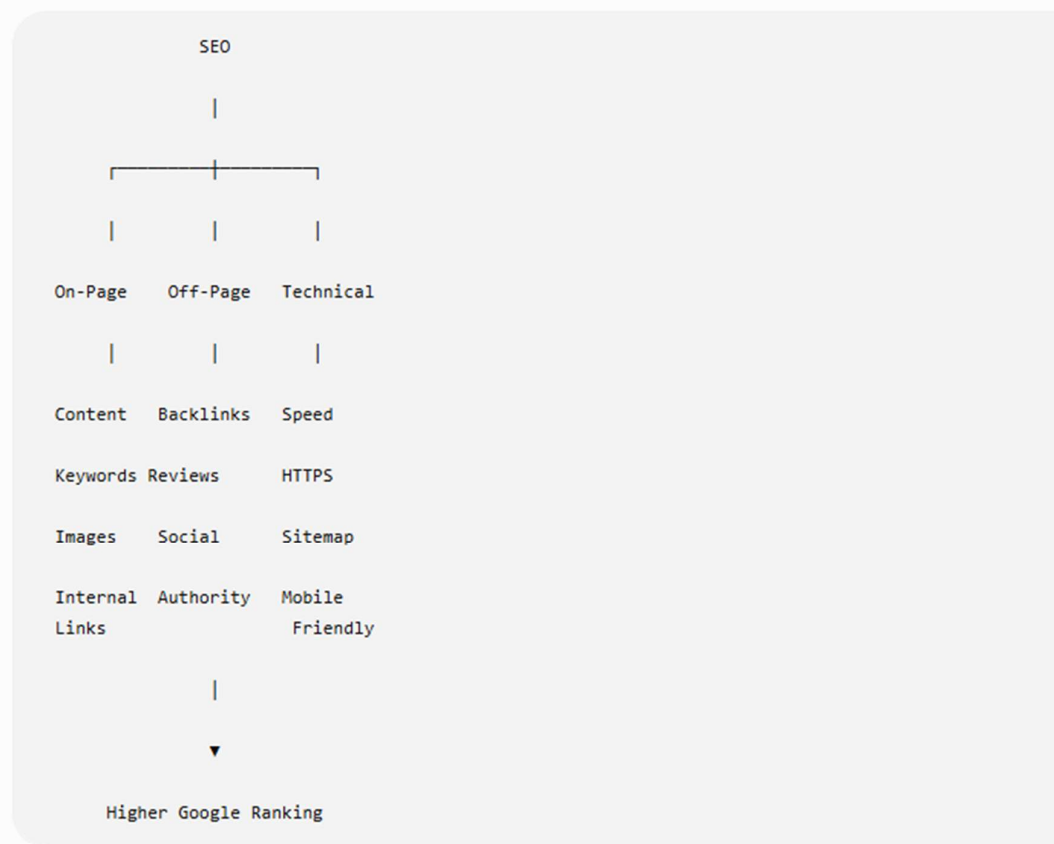

1. On-Page SEO
2. Off-Page SEO
3. Technical SEO

Each type plays an important role in improving search engine rankings.

## Types of SEO Optimization

## Complete SEO Process

- Page optimization, also known as on-page optimization, refers to the process of **optimizing individual web pages to rank higher** and earn more relevant traffic in search engines.
- The purpose of page optimization is to make the **website more search engine friendly and improve its visibility to users** who are searching for related information or products.
- This involves optimizing various **on-page factors** such as the *page title, meta description, headers, content, images, videos, internal links, and more.*  
Recorded with iTop Screen Recorder
- By improving these factors, you can enhance the relevance, usability, and user experience of your web pages, which can help **increase your search engine rankings and drive more targeted traffic to your site.**
- Proper page optimization can also improve the **overall quality and usability of a website**, making it more appealing to users and increasing the likelihood that they will engage with your content or take desired actions on your site.

|                    | On-Page Optimization                                                                               | Off-Page Optimization                                                                    |
|--------------------|----------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|
| Definition         | Refers to optimizing elements <b>within</b> a website to improve search rankings                   | Focuses on activities <b>outside</b> the website to improve its visibility and authority |
| Techniques         | Keyword optimization, content optimization, meta tags, site structure                              | Link building, social media marketing, guest blogging, influencer outreach               |
| Goal               | Enhancing website relevance and user experience                                                    | Building external signals of trust, authority, and popularity                            |
| Importance         | Crucial for targeting specific keywords and optimizing website content                             | Essential for building backlinks and promoting website authority                         |
| Impact on Rankings | Can directly influence search engine rankings<br><small>Recorded with iTop Screen Recorder</small> | Can indirectly influence search engine rankings through backlinks and authority          |
| Control            | Gives more control over website elements and optimization strategies                               | Less control as it depends on external factors and other websites                        |
| Examples           | Optimizing meta titles, headings, URL structure, internal linking                                  | Building quality backlinks from reputable websites, social media promotions              |
| Measurement        | Can be measured through on-page metrics like bounce rate, time on page                             | Measured by the quality and quantity of backlinks, social media shares                   |
| Time and Effort    | Requires regular monitoring and updates to website content                                         | Requires ongoing efforts to build relationships and acquire backlinks                    |
| Integration        | Works alongside off-page optimization to achieve comprehensive results                             | Complements on-page optimization by boosting website authority and visibility            |

## 1. On-Page SEO

### Definition

**On-Page SEO** is the process of optimizing the **content and HTML elements** of a webpage so that search engines can understand it better and rank it higher. It focuses on everything **inside the website**.

---

### **Objectives of On-Page SEO**

- Improve content quality.
  - Increase keyword relevance.
  - Improve user experience.
  - Increase search engine rankings.
- 

### **On-Page SEO Techniques**

#### **1. Keyword Optimization**

Keywords are the words people type into Google.

##### **Example**

Keyword:

Digital Marketing Course

Use naturally in

- Title
  - Headings
  - Paragraphs
  - URL
- 

#### **2. Title Tag Optimization**

Every webpage should have an attractive title.

##### **Example**

✗ Bad

Home Page

☑ Good

Best Digital Marketing Course in Ahmedabad

---

#### **3. Meta Description**

A short description shown below the page title in Google.

##### **Example**

Learn Digital Marketing with practical training, SEO, Google Ads and Social Media Marketing.

---

#### **4. URL Optimization**

URLs should be simple and meaningful.

✗ Bad URL

www.xyz.com/p123?id=45

☑ Good URL

www.xyz.com/digital-marketing-course

---

#### **5. Heading Tags (H1, H2, H3)**

Use headings to organize content.

Example

H1 → Digital Marketing

H2 → SEO

---

### H3 → On-Page SEO

---

#### **6. Image Optimization**

Use

- Small image size
- ALT Text
- Descriptive file names

Example

seo-techniques.jpg

instead of

IMG1234.jpg

---

#### **7. Internal Linking**

Link one page of your website to another.

Example

Home

↓

SEO Course

↓

Contact Us

---

#### **8. High Quality Content**

Content should be

- Original
  - Informative
  - Easy to understand
  - Updated regularly
- 

#### **9. Mobile Friendly Design**

Website should work properly on

- Mobile
  - Tablet
  - Laptop
- 

#### **Advantages of On-Page SEO**

- Better ranking
  - Better user experience
  - Higher traffic
  - Easy crawling
  - Better content quality
- 

#### **Example of On-Page SEO**

A college website

- Adds keywords
  - Optimizes images
  - Improves headings
-

- Writes quality content  
Google ranks it higher.
- 

## **2. Off-Page SEO**

### **Definition**

**Off-Page SEO** is the process of improving website ranking through activities performed **outside the website**.

It focuses on increasing website authority and reputation.

---

### **Objectives**

- Increase website authority
  - Improve trust
  - Generate backlinks
  - Increase brand awareness
- 

## **Off-Page SEO Techniques**

### **1. Backlinks**

A backlink is a link from another website pointing to your website.

Example

Wikipedia

↓

Your Website

High-quality backlinks improve ranking.

---

## **2. Social Media Marketing**

Promote website on

- Facebook
  - Instagram
  - LinkedIn
  - YouTube
  - X (Twitter)
- 

## **3. Guest Blogging**

Write articles on other websites.

Example

An SEO expert writes an article for another blog and includes a link to their own website.

---

## **4. Business Listings**

Register business on

- Google Business Profile
  - Justdial
  - IndiaMART
- 

## **5. Online Reviews**

Positive customer reviews improve trust.

Example

Google Reviews

★★★★★

---

---

## 6. Influencer Marketing

Influencers recommend products to followers.

---

### Advantages of Off-Page SEO

- Higher authority
  - Better reputation
  - More traffic
  - Better rankings
  - Increased trust
- 

### Example of Off-Page SEO

A restaurant receives

- 500 Google Reviews
- Instagram shares
- Food bloggers mention it

Its Google ranking improves.

---

## 3. Technical SEO

### Definition

**Technical SEO** is the process of improving the **technical aspects** of a website so that search engines can crawl, index, and rank it efficiently.

It focuses on website performance rather than content.

---

### Objectives

- Faster website
  - Better crawling
  - Better indexing
  - Better security
  - Better user experience
- 

### Technical SEO Techniques

#### 1. Website Speed

Fast websites rank higher.

Ideal loading time:

Less than **3 seconds**

---

#### 2. Mobile Friendliness

Website should automatically adjust to different screen sizes.

---

#### 3. HTTPS Security

Secure websites use

https://  
instead of  
http://

---

#### 4. XML Sitemap

A sitemap tells search engines about all important pages of the website.

---

#### 5. Robots.txt

Controls which pages search engines can or cannot crawl.

---

---

## 6. Broken Link Fixing

Remove or repair links that show 404 Error

---

## 7. Structured Data (Schema Markup)

Provides additional information to search engines.

Example

Product

Price

Rating

Reviews

---

## 8. Core Web Vitals

Google measures

- Loading Speed
  - Interactivity
  - Visual Stability
- 

## Advantages of Technical SEO

- Faster website
  - Better indexing
  - Higher rankings
  - Better security
  - Better user experience
- 

## Example of Technical SEO

An e-commerce website

- Compresses images
- Uses HTTPS
- Fixes broken links
- Creates XML Sitemap

Result

Website loads faster and ranks higher.

### Comparison of SEO Optimization Techniques

| Feature   | On-Page SEO          | Off-Page SEO       | Technical SEO              |
|-----------|----------------------|--------------------|----------------------------|
| Focus     | Website Content      | Website Reputation | Website Performance        |
| Performed | Inside Website       | Outside Website    | Website Backend            |
| Main Goal | Content Optimization | Build Authority    | Improve Crawling & Speed   |
| Examples  | Keywords, Meta Tags  | Backlinks, Reviews | HTTPS, Sitemap, Page Speed |

---

## What is SEO Ranking?

**SEO Ranking** is the position of a webpage in the search engine results page (SERP) for a specific keyword or search query.

### Simple Definition

**SEO Ranking is the position of a website on Google or another search engine when users search for related keywords.**

---

### Example

A user searches:

**"Best Engineering College in Gujarat"**

Google may display the results as:

#### Rank Website

- 1      www.collegeA.edu
- 2      www.collegeB.edu
- 3      www.collegeC.edu

Here, **College A** has the highest SEO ranking because it appears first.

---

### Search Engine Results Page (SERP)

The **SERP (Search Engine Results Page)** is the page displayed by a search engine after a user enters a query.

It may contain:

- Paid Advertisements
- Organic Search Results
- Featured Snippets
- Images
- Videos
- Maps
- FAQs

### SERP Example

Search Query:

"Best Digital Marketing Course"

-----  
Sponsored (Google Ads)  
ABC Institute

Sponsored  
XYZ Academy

Organic Results  
1. GTU Digital Marketing Notes  
2. Digital Marketing Tutorial  
3. SEO Course Guide  
-----

---

### Importance of SEO Ranking

Higher SEO ranking provides many benefits.

---

**1. More Website Visitors**

Websites appearing on the first page receive more clicks.

---

**2. Better Brand Visibility**

Top-ranked websites are seen by more users.

---

**3. Increased Customer Trust**

People generally trust websites appearing at the top of Google.

---

**4. Higher Sales and Leads**

More visitors usually result in more inquiries and sales.

---

**5. Competitive Advantage**

Higher rankings help businesses stay ahead of competitors.

---

**Important Factors for SEO Ranking**

Google uses **hundreds of ranking factors**, but the following are the most important.

---

**1. Quality Content**

Content should be:

- Original
- Informative
- Useful
- Updated regularly

**Example**

A detailed article on "**SEO Techniques**" with images and examples is more valuable than a short copied article.

---

**2. Keyword Optimization**

Use relevant keywords naturally in:

- Title
- Headings
- URL
- Content
- Meta Description

**Example**

Keyword:

Search Engine Optimization

Avoid keyword stuffing.

---

**3. Backlinks**

Backlinks from trusted websites increase authority.

**Example**

A link from **Wikipedia** or a university website is more valuable than links from unknown websites.

---

**4. Mobile-Friendly Website**

Most users browse on smartphones.

Google gives preference to websites that work well on mobile devices.

---

---

## 5. Page Loading Speed

Fast websites improve user experience.

Ideal loading time:

**Less than 3 seconds**

---

## 6. User Experience (UX)

A good website should have:

- Easy navigation
  - Attractive design
  - Readable text
  - Clear menus
  - Responsive layout
- 

## 7. Secure Website (HTTPS)

Websites using **HTTPS** are considered safer and more trustworthy.

Example:

✓ <https://www.example.com>

✗ <http://www.example.com>

---

## 8. Fresh Content

Regularly updating website content improves rankings.

Example:

A technology blog updated every week performs better than one updated once a year.

---

## 9. Domain Authority

Older, trusted websites with quality content often rank higher.

Example:

Government websites (.gov) and educational websites (.edu) generally have high authority.

---

## 10. Technical SEO

Technical improvements include:

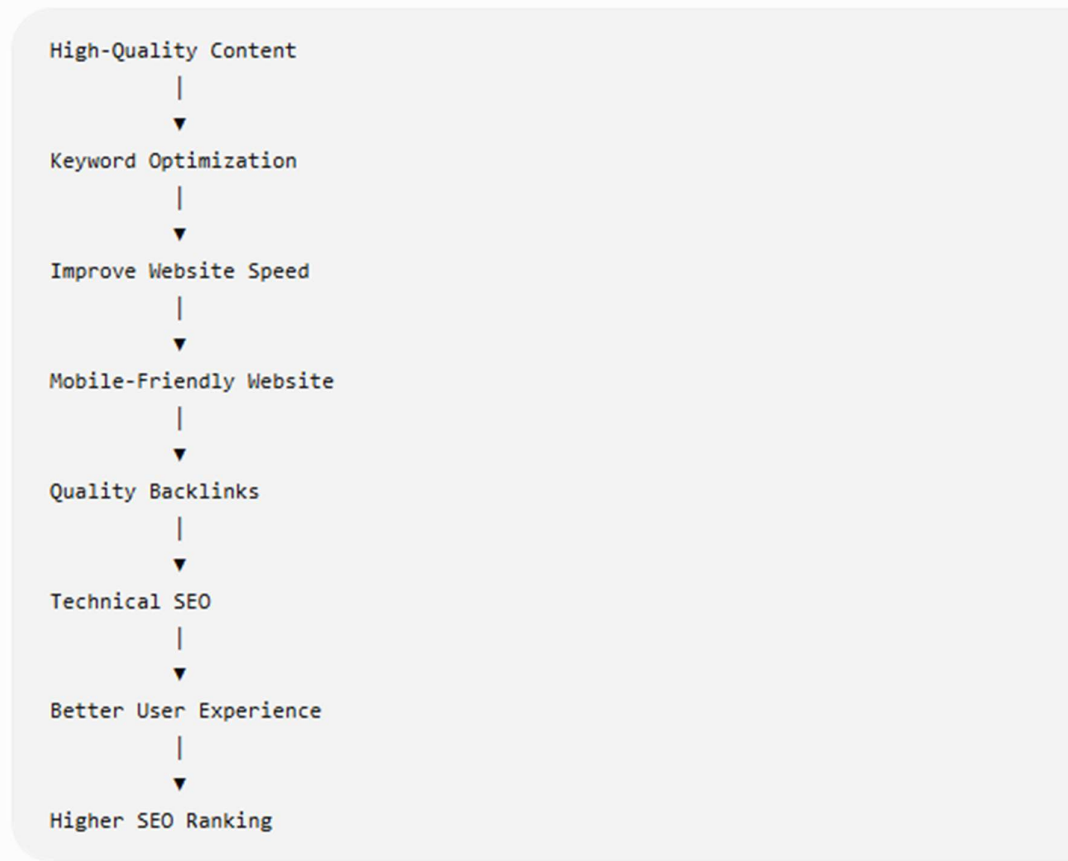

- XML Sitemap
- Robots.txt
- Mobile Optimization
- Core Web Vitals
- Structured Data
- Fixing Broken Links

These help search engines crawl and index the website efficiently.

---

## Techniques to Improve SEO Rankings

## Flowchart: Techniques to Improve Rankings

To achieve higher rankings, businesses should follow these techniques.

---

### 1. Publish High-Quality Content

Create original, useful, and engaging content.

Example:

Blogs, tutorials, FAQs, and case studies.

---

### 2. Use Proper Keywords

Research keywords using tools such as:

- Google Keyword Planner
- Google Trends
- Ubersuggest

Place keywords naturally in titles, headings, and content.

---

### 3. Improve Website Speed

Methods:

- Compress images.
  - Minify CSS and JavaScript.
  - Use browser caching.
  - Choose a fast hosting service.
-

---

#### **4. Make the Website Mobile-Friendly**

Use responsive web design so the website adapts to different screen sizes.

---

#### **5. Build Quality Backlinks**

Earn backlinks from:

- Educational websites
- Government websites
- Industry blogs
- News portals

Avoid buying backlinks.

---

#### **6. Optimize Meta Tags**

Write attractive:

- Title Tags
- Meta Descriptions

These improve click-through rates.

---

#### **7. Improve Internal Linking**

Link related pages within the website.

Example:

Home → SEO → On-Page SEO → Contact Us

---

#### **8. Use HTTPS**

Install an SSL certificate to make the website secure.

---

#### **9. Update Content Regularly**

Review and update old articles with new information.

---

#### **10. Monitor Website Performance**

Use tools such as:

- Google Search Console
- Google Analytics

Track:

- Website traffic
- Click-through rate (CTR)
- Bounce rate
- Keyword rankings
